**EXAM: Chinese Consulate: Covid Nucleic Acid Test+Certificate+Consent Form+Portal+IgG/IgM Screening Test**

Result : SARS-COV2 RNA is not Detected

Report : Negative

Principle:

SARS-CoV-2 PCR is a Qualitative Test. The Viral RNA is isolated and Reverse transcribed into cDNA and amplified using Specific Primer Probes for ORF 1 ab and the specific conserved sequence of coding nucleo-capsid protein N gene. Internal control is co-amplified to avoid false negative result.

**CERTIFICATE:**

Please proceed with your travel arrangements, carry this test certificate along with necessary travel documents to allow you to check-in at the airport and to show it upon arrival at your final airport destination. Dr Essa Laboratories wishes you a safe flight.

Test Name	Results	Normal Ranges
SARS-COV-2 antibody IgG	(0.34)	< 1.1 AU / mL Negative > 1.1 AU / mL Positive
SARS-COV-2 antibody IgM	(1.2)	< 1.0 AU / mL Negative > 1.0 AU / mL Positive

Remarks:

- Antibodies test to COVID-19 is not sole diagnostic test. The results for COVID-19 antibody test needs to be interpreted in conjunction with the patient's medical history and clinical findings.
- A negative result does not eliminate the possibility of SARS-CoV2 infection, particularly in those who have been in contact with the virus less than 14 days before testing
- The test will show negative results in following conditions: The titre of the novel antibodies in the sample lower than minimum detection limit of the test or novel coronavirus antibody has not appeared at the time of sample collection.
